# Journey to the Cloud for Simplified IT Management

Today's competitive landscape demands technology solutions that can support a variety of business initiatives and functions. But with challenges including heterogeneous environments, limited or no dedicated IT staff and constrained resources, meeting these needs can be a difficult task for your staff—and budget.

Moving to the cloud will enable your business to increase productivity by automating processes and maximizing resources. Access to on-demand management tools allows your staff to recoup valuable time to focus on meeting the needs of your customers. The added flexibility of working anywhere, anytime enables you to manage and control your growing mobile workforce.

Answer Your Business Challenges

To realize the full potential of cloud computing, it's important to take a holistic approach to evaluating technology needs across your organization—rather than by department. Identifying an integrated list of business requirements will help you evaluate solutions to find synergies that will strengthen and optimize your IT network.

Deploying these types of cloud-based solutions, as a part of your overarching mobile device management (MDM) strategy, will enable you to quickly solve your business challenges. Leveraging HP Touchpoint Manager in your plan will help you boost productivity, decrease IT overhead costs and find new efficiencies.

Meet the Cloud-Based HP Touchpoint Manager

HP has a simple solution for small businesses and organizations with limited IT resources. HP Touchpoint Manager will secure and protect all of your mobile devices through a single application. Your staff can quickly troubleshoot security threats in real time. Point-and-click security policies can be used across all of the smartphones, tablets and desktops running Windows, Android and iOS in your wireless network.

This powerful one-stop solution allows you to:

- Manage all of your devices from virtually anywhere

- Track device health and enforce security policies

- Detect and respond to issues quickly using automatic alerts and geo-mapping

- Locate a device immediately from virtually anywhere

- Lock and wipe data instantly from lost or stolen devices—on- and off-premise

- Remotely access and control user devices

- Recoup valuable IT management time previously spent managing multiple applications

- Achieve greater cost predictability with subscription-based pricing

Fuel Business Growth with Expertly Tailored IT Solutions

The senior-level beiNVENTiV team leverages HP Touchpoint Manager in its extensive portfolio of comprehensive IT solutions designed to optimize mobile networks. We expertly architect deployments using the latest technologies available to solve business challenges and boost productivity.

Our unique team of senior-level IT specialists excels at aligning systems to support business initiatives—often exposing new opportunities to gain greater efficiencies. The value we deliver continues to be demonstrated long after deployment—it will be evident in your increased ability to meet and exceed customer expectations.

Three Key Strengths of the beiNVENTiV Portfolio

1. **IT Foundations.**
   Our full suite of IT services—from networking support and server maintenance to e-mail configuration and desktop assistance—delivers all of the technology expertise you need from a single source.

2. **IT Platforms.**
   We design technical solutions leveraging a wide range of advanced technologies to tailor solutions to meet your specific business needs, including Office 365, Azure, SharePoint, Dynamics CRM and Hosted QuickBooks.

3. **Custom Solutions.**
   We take a proactive approach to business problems by creating full solutions in-house to solve common business challenges.
